KRISTIN SCHOOL · ORIENTATION DECK

Three things to push on.

Concentrate the Ark · put parents in the loop · tune the Conscience.

Prepared by Tom Thompson · tom@DreamCatcher.ai

Parent of Harry Thompson · Junior School applicant, unconfirmed

THE IMMEDIATE PRESSURE

Parents are asking: “what do we do?”

Do not dissipate that energy in meetings. Give it a concrete interface.

Without an interface

Energy leaks into reassurance, anxiety, side channels and repeated debate.

With a pilot surface

Energy becomes adult testing, scenarios, funding signals, policy friction and proof.

The object to push on

A portable Ark, a visible Conscience, and a proof-point cadence the school can govern.

THE OPERATING MAP

Run three paths concurrently.

1 • Concentrate

Pull diffuse tooling, records, decisions and evidence into a Ark the person or family can carry forward.

Proof: ownership, portability, continuity.

2 • Parents first

Issue parent Arks and use adults as testers, simulated students, supervisors and guardian-test authors.

Proof: trust, friction, real cost, real questions.

3 • Tune Conscience

Test the humane middle between total opacity and surveillance: permitted summaries, explainable blocks, escalation.

Proof: visibility parameter, safety evidence.

Parent energy → three pilot paths → evidence gate

Each path produces proof-points the school can review monthly before any child-facing release: safety decisions, trust gaps, budget, support load, custody drills, and blockers parents can help unblock.

PATH 1 · CONCENTRATE

Haul diffuse tooling into one portable Ark.

The Ark is the non-diffusion move.

The issue is not just “too many AI tools.” It is school portals, SaaS apps, files, inboxes, model chats and family

What this path proves

- Can a parent or student carry a long-lived Ark across tools?
- Can records, values, learning evidence and decisions accumulate instead of evaporating?
- Can services remain replaceable around the Ark?

PATH 2 · PARENTS FIRST

Parents are not an audience. They are the first adult test cohort.

Issue parent Arks.
Let adults act as guinea pigs before children do.

Parents can consent,

Useful parent roles

- Adult users of real cores.
- Supervisors of simulated student Arks.
- Source of guardian tests and awkward scenarios.
- Funding/time signal when blockers are visible.

PATH 3 · CONSCIENCE

**The Conscience is
the parent of
confidentiality.**

Confidentiality is not
a switch. It is a
parameter to tune.

Too opaque and the
school cannot help. Too
visible and the child
loses agency and trust.

THE CADENCE

Make the roadmap absorb the energy.

1 • Issue cores

Start with staff and parent volunteers. Keep the first cohort small and consent-based.

2 • Run guardian tests

Use parents, teachers and synthetic students to test the Conscience, containment, cost and custody.

3 • Publish proof-points

Monthly evidence: what worked, what blocked release, what needs money, time or review.

Open: Child-Safety-First Resource Avenues

DEEP DIVES

This deck is the front door. Use the detailed decks for the work.

Defragmenting the User

Why the old world scatters the person and the new world makes the person the Ark.
